

Kaspersky Quick Facts

- The world's largest privately-held anti-malware company
- Unprecedented growth, eight times the industry average
- Over 300+ million users worldwide
- 50,000 new systems added every day

About Kaspersky

Kaspersky Lab delivers the world's most immediate protection against IT security threats, including viruses, spyware, crimeware, hackers, phishing, and spam. Our products provide superior detection rates and the industry's fastest outbreak response time for SMBs, large enterprises, home users, and the mobile computing environment. Kaspersky® technology is also used worldwide inside the products and services of the industry's leading IT security solution providers.

We put all our resources and know-how into preventing these threats from spreading. We help educate the community at large on best practices to ensure the greatest possible online security.

The success of our mission has resulted in Kaspersky Lab emerging as the world's largest privately held anti-malware company. Founded in 1997, the company offers its products and technologies to industry and consumers in virtually every country around the globe. Today, more than 300+ million users worldwide are protected by our technologies. And every day, we add more than 50,000 new systems.

As a result of supporting our customers' needs, Kaspersky Lab has grown to more than 2,000+ employees, with more than half of us focused on R&D and customer support. Our products have continually received the highest recognition for quality.

During the past decade and a half, Kaspersky Lab has been leading the anti-virus industry in innovations, starting with the first use of external database signatures in 1992, as well as being first to develop and implement heuristic virus analysis and linguistic text analysis. Its international team of experts continuously analyze the latest security trends 24/7/365, thus allowing for the industry's fastest response time to Internet threats and enabling the business to develop new and forward-looking technologies (many of which are now commonly used in security products throughout the world) – ahead of the competition. It is the company's mission to always stay one step ahead of its competitors in offering excellence: the best protection possible and ensuring the company's product portfolio remains at the vanguard of the market.
