Kaspersky Receives Top Scores in Overall Protection

In the AV Comparatives 2010 Corporate Product Review, Kaspersky took top honors by receiving 5 Stars, the highest rating available, for best overall performance in the 12 categories tested. Kaspersky also received one of the highest spam Detection rates, detecting 99% of spam with no false-positives.

AV Comparatives summarized it's testing of Kaspersky in a very positive way.

"Kaspersky has, as it did last year, produced a very good corporate suite, which can be recommended to everyone without reservation. It is of particular note that Kaspersky is one of very few manufacturers to produce a real-time display of the status of client deployment. It is actually mystifying that other software companies don't follow Kaspersky's excellent example and allow the administrator to keep up with the installation status of the clients."

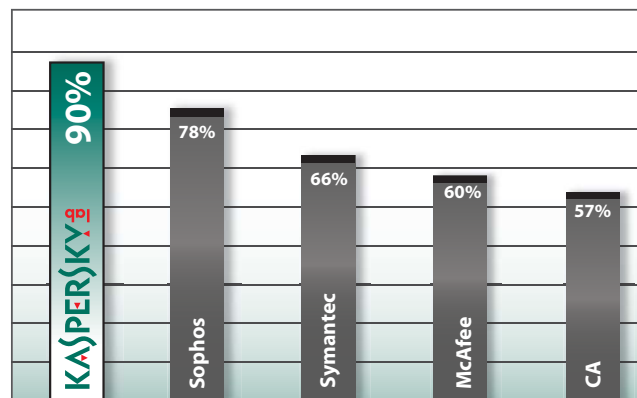

Kaspersky received, yet again, the coveted VB100 award from Virus Bulletin, August 2010.

Kaspersky had the highest Reactive & Proactive (RAP) test score, 90.66%, outperforming the competition and beating Symantec and McAfee by more than 20%.

VB100 noted that, along with detection rates, Kaspersky showed "excellent speed improvements" and "very low RAM usage."

Kaspersky consistently outperforms the competition in overall protection. This means we are able to provide the best protection from malware for our customers with superior performance that keeps users productive.
