

Switching to Premium Protection is a Snap with Kaspersky!

Kaspersky Lab, a leading developer of Internet threat management solutions that protect against all forms of viruses, spyware, hackers and spam, has made switching to premium protection easy, safe and fast!

Switching to a new malware protection suite in the past has been an arduous effort, so much so that many companies continue to use an inferior product that provides poor performance and protection, because it's easier than switching to another vendor.

Kaspersky's management console, the Administration Kit, is designed to make installation, configuration and management of your malware security suite a simple and painless process!

Easy Deployment

- Single product package containing everything required to immediately protect the network
- Auto-discovery of network computers, Wizard-driven deployment scenarios including 1-click deployment and native GPO rollout support
- Robust 3rd-party application removal tool allowing automatic removal of applications that are incompatible with Kaspersky
- Fully automated license distribution
- Single and configurable client restart: Does not restart, immediate restart or prompt user for action
- Default settings based on best practices

Easy Management

- Management of all Kaspersky products from one central console
- Dashboard that provides continuous system monitoring
- An interface that is easy for any user
- Integration with active directory for group deployment and policy management
- Policy structures that allow flexible configuration
- Scalability for large networks
- Update verification to prevent conflicts
- Expanded reporting options

And much, much more!! Switch today and enjoy the best protection and performance available.
