

Why?

Open Space Security

- › Unmatched anti-malware protection
- › Small footprint for fast performance
- › Comprehensive management and reporting
- › Easy to install, easier to manage

Kaspersky® *Open Space Security*

Kaspersky Open Space Security is a suite of products that offers security coverage for all types of network endpoints, from mobile devices to servers. Incoming and outgoing data traffic – including email, web traffic and network interactions – is scanned for malicious content and management is simplified by using a set of powerful administration tools.

Kaspersky Open Space Security supports all the main platforms – Windows, Linux, Novell NetWare, etc. – and is easy to install and use. This suite of products is capable of protecting several types of network nodes simultaneously. The customer can choose one of the three Open Space product options depending on which corporate network components require protection:

- Kaspersky Business Space Security
- Kaspersky Enterprise Space Security
- Kaspersky Total Space Security

Protection

Unmatched malware detection, removal and protection from both known and unknown exploits. Our protection is customizable, based on individual roles, locations or both.

Performance

Super-fast when it comes to scanning systems or the traffic that comes through your network. Kaspersky won't slow your users down. The smallest possible client footprint and frequent, small updates mean your users have the bandwidth they need, when they need it.

Manageability

A new graphical user interface makes security-related management tasks quick and easy. Easy-to-read, real-time reports give you critical information at your fingertips, so your IT managers can focus their attention where it is needed.

Deploy in a Snap

We understand that no business wants to undertake a wieldy and time-consuming transition. That's why Kaspersky builds business security products with an eye for exceeding our customers' expectations from the onset. Our solutions discover the systems on your network, remove incompatible software, send and install Kaspersky software, and implement security policies – all using user-friendly wizards to guide you and your team through the process.

Business Space Security

Provides high-quality protection for corporate information assets from all types of contemporary Internet threats.

Kaspersky Business Space Security offers protection to workstations, smartphones, and file servers from all types of computer threats, prevents epidemics of malicious programs, and keeps information secure and fully accessible to users of network resources. The product was designed to meet the increasing demands of servers operating under heavy loads.

Product Highlights

- Anti-virus protection for key network nodes: workstations, laptops, file servers and smartphones
- New anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for file servers running Windows, Linux and Novell NetWare
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Full support for 64-bit systems

Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device Control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

Available Products

- Workstations
- File Servers
- Management

Kaspersky® *Open Space Security*

Enterprise Space Security

Ensures the free flow of information within your organization and secure communication with the outside world.

The solution includes components for the protection of workstations, smartphones and both mail and file servers from all types of contemporary computer threats, removing malware from emails and keeping information secure and fully accessible to users of network resources.

Product Highlights

- Anti-virus protection for critical network nodes: workstations, laptops, file and mail servers as well as smartphones
- New anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for file servers running Windows, Linux and Novell NetWare
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Anti-virus protection for Sendmail, qmail, Postfix and Exim mail servers
- Scanning of messages, databases and other objects on Lotus Notes/Domino servers
- Scanning of all messages on Microsoft Exchange servers, including public folders
- Blocks mass mailings and malware outbreaks
- Full support for 64-bit systems

Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device Control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

Available Products

- Workstations
- File Servers
- Mail Servers
- Management

Total Space Security

Provides integrated protection for corporate networks of any size or level of complexity from all types of contemporary computer threats.

The solution includes components for the protection of workstations and smartphones, providing users with secure and fast access to company information resources and the Internet, as well as secure communications via email.

Product Highlights

- Integrated protection from malware, spyware, hacker attacks and spam at all levels of the corporate network from workstations to Internet gateways
- A new anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for file servers running Windows, Linux and Novell NetWare
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Anti-virus protection for Sendmail, qmail, Postfix and Exim mail servers
- Scanning of messages, databases and other objects on Lotus Notes/Domino servers
- Scanning of all messages on Microsoft Exchange servers, including public folders
- Blocks mass mailings and malware outbreaks
- Centralized protection from spam
- Centralized anti-virus scanning of Internet traffic (HTTP/FTP) in real time
- Protects Microsoft ISA Server (including server arrays)
- Support for proxy server appliances
- Full support for 64-bit systems

Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device Control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

Available Products

- Workstations
- File Servers
- Mail Servers
- Anti-Spam
- Mobile Security
- Management

Administration Kit 8.0

Get a single view of your business-wide security situation with a simple and intuitive interface for managing security across the corporate network down to an individual device with Kaspersky Administration Kit 8.0. Set and enforce security policies on the devices employees use wherever they go. And get real-time security information delivered the way you want it.

Easy Installation & Deployment

- One-step installation of all components
- Easy upgrade from previous versions
- Automatic generation of installation packages
- Automatic generation of policies and tasks
- Automatic and configurable network discovery
- Simplified “Rip & Replace” with automatic removal of incompatible applications
- Integration with Active Directory
- A single, configurable reboot required
- Improved remote installation

Simplified Management

- Scenario-based administration provides a set of pre-loaded, “canned” tasks, that are wizard driven and help identify, create and manage a number of standard workflows
- Improved interface – easy for beginners and powerful for experts
- Less clicks to complete a task
- Cisco NAC/MS NAP support
- Mobile user policy support
- Wake-on-LAN support
- Bandwidth throttling

Powerful Reporting

- Dashboards for real-time status information
- Expanded reporting formats (PDF, XML, SQL Views)
- SNMP Support for integration with security consoles
- Systems Admin auditing

Kaspersky® Open Space Security Protection

Kaspersky's solutions suit the needs of your organization. Whether it's protection for workstations and file servers, or mail and gateway protection, you will find exactly what you need to ensure the security of your environment both on the network and outside the office.
